

AIUT sp. z o.o.

ul. Pszczyńska 44
44-100 Gliwice, POLAND

To Whom It May Concern

GASPOL S.A. is pleased to announce that AIUT Ltd. Gliwice, Poland has been awarded the status of the exclusive vendor in the supply of LPG tank and gas meter monitoring system for the year 2003.

Deciding to go forward with a meter reading system is a major decision and one that will impact virtually every activity and department at our company (e.g. Billing, IT, Legal, Purchasing, Marketing, Engineering) for the term of the contract.

As a result we have had very high demands related to the design and sophisticated functionality and AIUT staff has displayed remarkable creativity and patience in developing solutions that meet our special requirements.

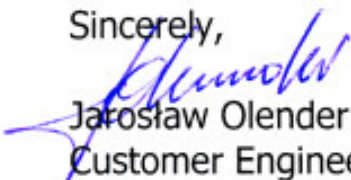

Data is transmitted from each consumer pulse meter or tank level gauge using radio waves to a local master where it is logged and forwarded via GSM network to the operation centre. Elimination of cabling means installation is very quick and easy.

With remote meter reading, GASPOL S.A. will be able to change the billing period to one month and plan deliveries to various consumers more efficiently. AIUT innovative technology enables improvement of customer service: maximise delivery volumes, eliminate run outs and eradicate unauthorized usage of GASPOL storage space (so called 'Pirate' filling).

The three main reasons the partnership with AIUT has been so successful are their responsiveness, reliability and, basically, their honesty.

We would have no hesitation in recommending AIUT GSM telemetry solution to any of your prospective clients.

Sincerely,

Jarosław Olender
Customer Engineering
and Transport Manager
