Recommendation

LPG tank level monitoring developed by AIUT is using on BP petrol stations in Poland.

Petrol station infrastructure consisted of Petrovend and Veeder-Root Petrol Wet Stock Control Systems and control unit collecting data from gasoline probes. In reply to our requirements AIUT has interfaced their LPG tank level monitoring system to local control units. Aggregated LPG tanks level is now online accessible in central fuel management system and is displayed on local control unit.

Installation simplicity is an extra advantage we want to emphasize. Even without training, servicemen are able to mount and start up the system on site in only few minutes.

I would like to recommend AIUT for flexibility and high quality robust solution.
